Co+op Explorers know healthy soil is important!

Organic farming builds rich, healthy soil that is full of life! When the soil is healthy, farmers can grow awesome veggies that taste delicious. Take a closer look at what's happening in organic soil.

When you see the USDA Organic symbol on a package or sign, it means that the food was produced in a way that is good for plants, pollinators and people.

Organic

Bee A-mazing

This bee has a very important job to do! He must carry pollen from one flower to another in the strawberry patch so that strawberries can grow. Insects and other animals that do this job are called “pollinators.” Organic farmers make sure their farms include lots of places for pollinators to live.

This bee is a little lost at the moment, can you show him the way to the next flower?

When you see the USDA Organic symbol on a package or sign, it means that the food was produced in a way that is good for plants, pollinators and people.

Organic

Did you know that there are over 2,500 varieties of apples grown in the United States? Which kinds of apples do you like?

When you see the USDA Organic symbol on a package or sign, it means that the food was produced in a way that is good for plants, pollinators and people.
